Center for Acute Disease Epidemiology (CADE) Staff.....	21

INTRODUCTION

The Center for Acute Disease Epidemiology (CADE) uses the most recent Council of State and Territorial Epidemiologists (CSTE) / Centers for Disease Control and Prevention (CDC) case definitions found on the [National Notifiable Disease Surveillance System \(NNDSS\)](#) page. These definitions are used to classify the case as confirmed, probable, suspect, not a case, or awaiting more information. **Only confirmed and probable cases meeting the CSTE/CDC case definitions are included in official case counts.**

CADE began using the suspect case definition as a final classification on Jan 1, 2017. Suspect cases are not included in the official case count but only meant to better estimate burden of disease. Any counts in this report from dates prior to Jan 1, 2017 do not include suspect cases.

Disease case counts were compiled from the Iowa Disease Surveillance System (IDSS). Data are provisional and subject to monthly reporting variation.

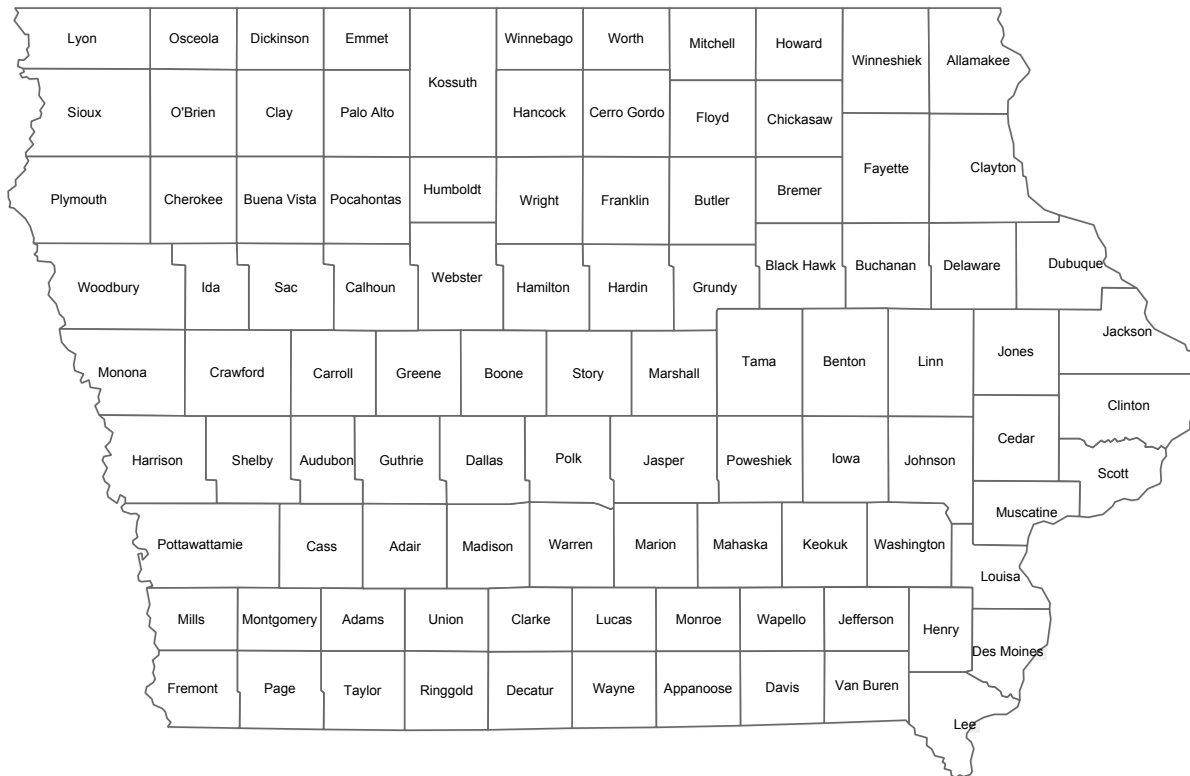

Hospitalization data is collected from the IDSS database. In some instances, cases may have been hospitalized for reasons other than the disease indicated.

Forecasting was done using Tableau forecast models.

Rates were calculated using the April 1, 2010 estimated census population for the State of Iowa.

Iowa County Boundaries and Population

2010 Census Data

April 1, 2010 population estimates

Adair	7,682	Floyd	16,303	Monona	9,243
Adams	4,029	Franklin	10,680	Monroe	7,970
Allamakee	14,330	Fremont	7,441	Montgomery	10,740

-9%
Change from previous
5 year average

Reported cryptosporidiosis cases and incidence rates per 100,000 population by county of residence for the past 12 months

Cryptosporidiosis cases by age past 12 months

Hospitalizations in the past 12 months

64 (11%)

Cryptosporidiosis cases by gender past 12 months

Female	336
Male	258

Reported cryptosporidiosis cases by date of onset or first lab result and 6 month forecast

Giardia

13

Cases in April

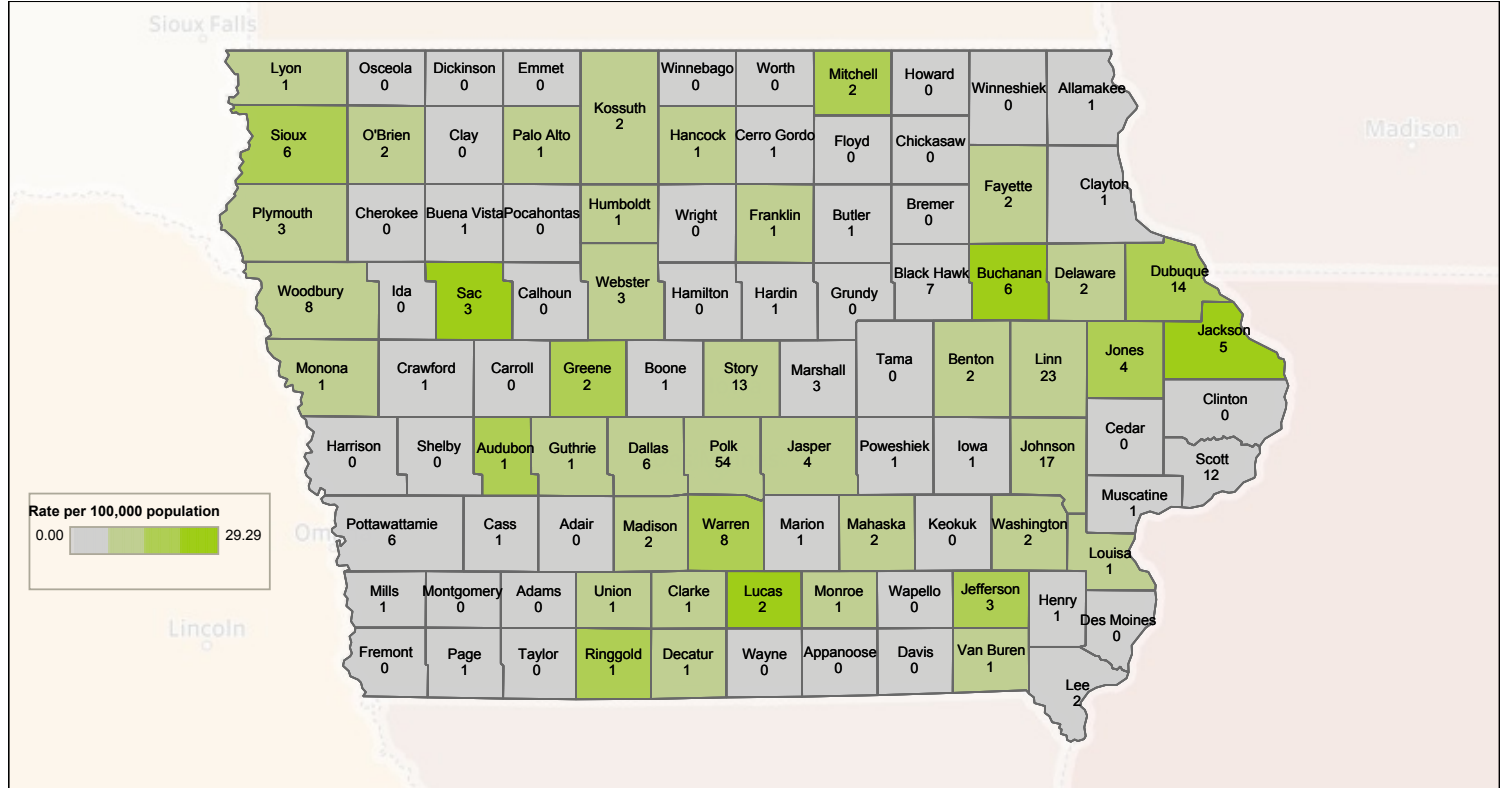

263

Cases in the last 12 months

+8%

Change from previous
5 year average

Reported giardiasis cases and incidence rates per 100,000 population by county of residence for the past 12 months

Giardiasis cases by age past 12 months. Nearly a third of all cases occurred in the 40-64 age group.

Hospitalizations in the past 12 months

24 (9%)

Giardiasis cases by gender past 12 months

Female	111
Male	152

Reported giardiasis cases by date of onset or first lab result and 6 month forecast

Lyme disease

3

Cases in April

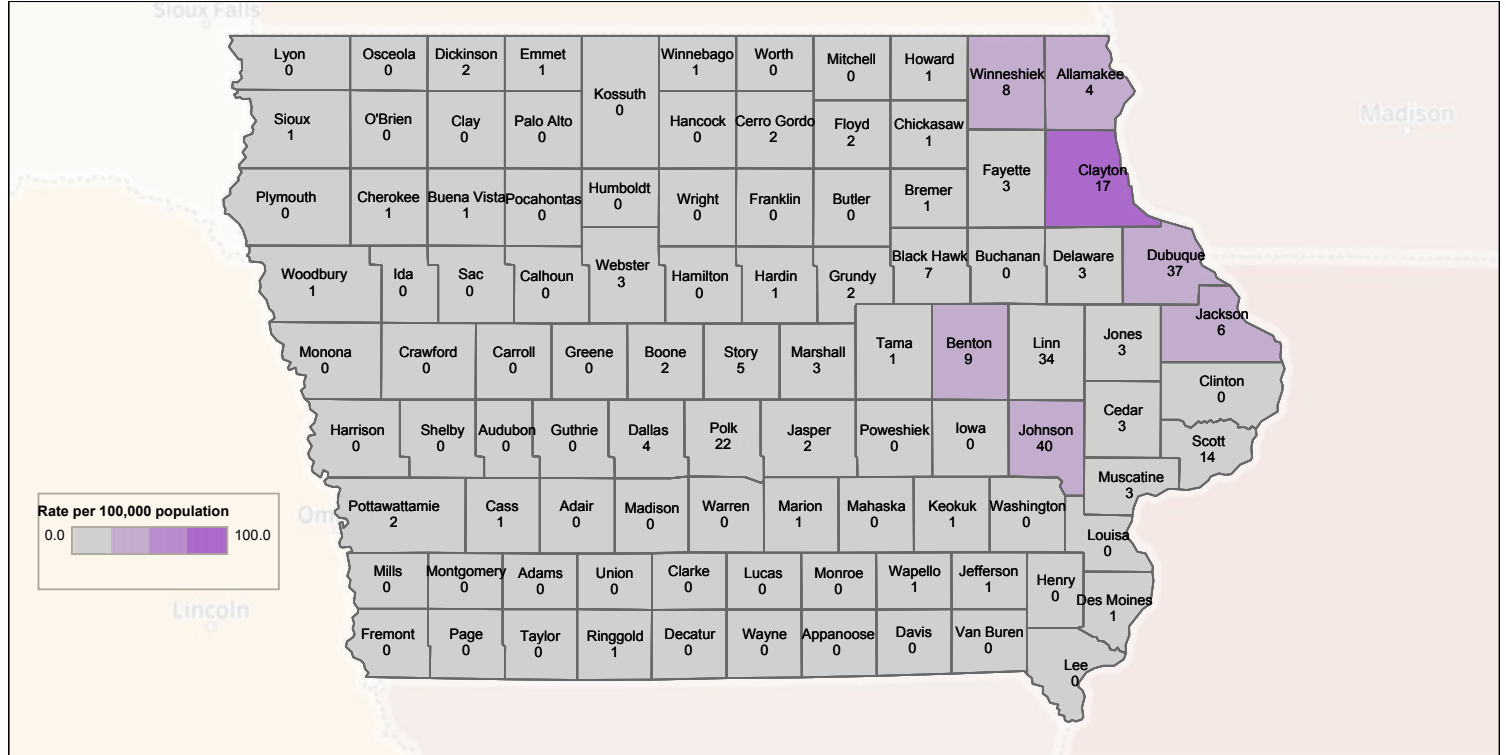

260

Cases in the last 12 months

+9%

Change from previous
5 year average

Reported lyme disease cases and incidence rates per 100,000 population by county of residence for the past 12 months

Lyme disease cases by age past 12 months. Over 55 percent of all cases were in the 5-19 and 40-64 year old age groups.

Hospitalizations in the past 12 months

33 (13%)

Lyme disease cases by gender past 12 months

Female	104
Male	156

Reported lyme disease cases by date of onset or first lab result and 6 month forecast

Mumps

1

Cases in April

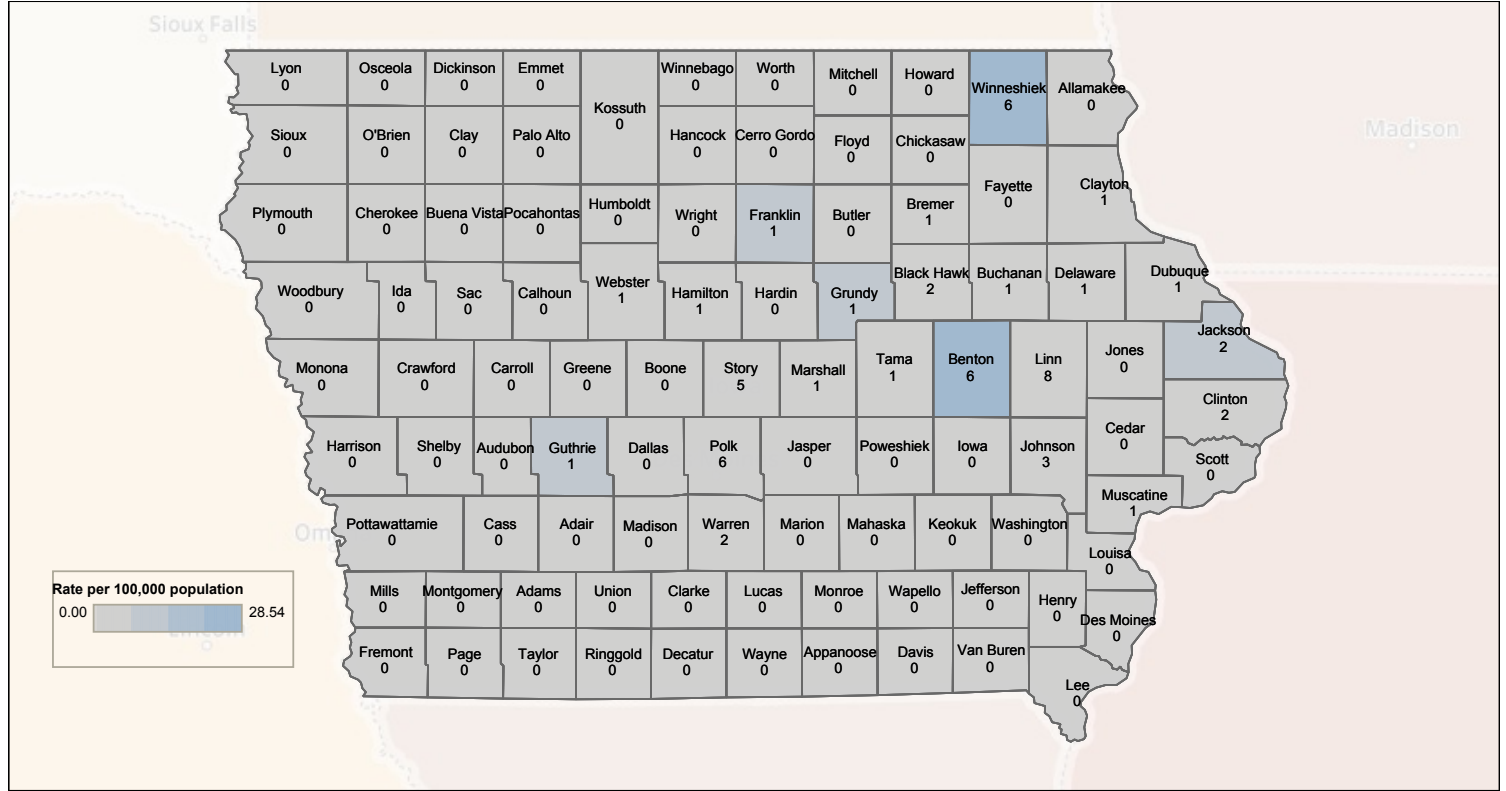

67

Cases in the last 12 months

-78%

Change from previous
5 year average

Reported mumps cases and incidence rates per 100,000 population by county of residence for the past 12 months

Mumps cases by age past 12 months.

Hospitalizations in the past 12 months
